

PROB. 14-8

$$M_A = 240 \text{ kg}, M_B = 260 \text{ kg}, M_C = 235 \text{ kg}$$

$$\vec{V}_{AO} = (2) \hat{i} \frac{m}{s}, \vec{V}_{BO} = 0, e = 0.8$$

FIND  $V_{CF}$  SUCH THAT  $V_{BF} = 0$  AFTER B HITS C

A HITS B :

$$M_A V_{AO} = M_A V_{AF} + M_B V_{BF}$$

$$(240)(2) = (240)V_{AF} + (260)V_{BF}$$

$$240 V_{AF} + 260 V_{BF} = 480$$

$$V_{BF} - V_{AF} = e(V_{AO} - V_{BO})$$

$$V_{BF} = V_{AF} + 0.8(2) = V_{AF} + 1.6$$

$$240 V_{AF} + 260(V_{AF} + 1.6) = 480$$

$$500 V_{AF} = 64 \Rightarrow V_{AF} = 0.128 \frac{m}{s} \rightarrow$$

$$V_{BF} = (0.128) + 1.6 = 1.728 \frac{m}{s} \rightarrow$$

B HITS C :

$$M_B V_{BO} + M_C V_{CO} = M_B V_{BF}^{AO} + M_C V_{CF}$$

$$(260)(1.728) + (235)(V_{CO}) = (235)V_{CF}$$

$$V_{CO} = V_{CF} \bar{\theta} 1.912$$

$$V_{BF}^{AO} - V_{CF} = e(V_{CO} - V_{BO})$$

$$V_{CF} = -0.8(V_{CO} - 1.728) = -0.8V_{CO} + 1.382$$

PROB. 14-8 CONT.

$$V_{CF} = -0.8(V_{CF} - 1.912) + 1.382$$

$$V_{CF} = -0.8V_{CF} + 2.912$$

$$V_{CF} = 1.617 \frac{m}{s}$$

$$V_{CO} = 1.617 - 1.912 \quad \boxed{= -0.2944 \frac{m}{s} \leftarrow}$$
